DUTAFINE-05

Dutasteride 0.5mg Softgel Cap.

Benign Prostatic Hyperplasia (BPH):

- Dutasteride is mainly prescribed to treat enlarged prostate in men.
- It works by inhibiting the conversion of testosterone to dihydrotestosterone (DHT), a hormone that contributes to prostate growth.
- Benefits include improved urinary flow, reduced difficulty in urination, and lowering the risk of needing prostate surgery.

Male Pattern Hair Loss (Androgenetic Alopecia):

- Though not always the first-line treatment, dutasteride is sometimes used off-label for hair loss.
- By reducing DHT levels, it helps slow down hair follicle miniaturization and may promote hair regrowth.

patients with chronic congestive heart failure

Effects on body weight, edema, and electrolyte excretion

Torsemide acts on the $\text{Na}^+/\text{K}^+/\text{2Cl}^-$ co-transporter. Torsemide inhibits sodium ion transport across the renal tubular epithelium in the cortical diluting segment of the ascending limb of the loop of Henle.

Torsemide indirectly increases potassium excretion via the sodium-potassium exchange mechanism.

VILDACOP M FORTE

Vildagliptin 50mg Metformin 500mg **50/500**
Tablets

VILDAGLIPTIN

- * Reduces the amount of a substance called glucagon being produced by pancreas.
- * Glucagon causes liver to produce more sugar, so by reducing the amount of glucagon, this helps to reduce the levels of sugar in blood.

METFORMIN

- * Inhibits gluconeogenesis for different mechanisms
- * First line agent for treatment of T2DM²
- * Decreases cardiovascular events

BENEFITS OF COMBINATION

- * Metformin and vildagliptin are both anti-diabetic agents that are used in combination to treat diabetes mellitus type-2. In particular, metformin increases the body's sensitivity to insulin.
